Round 5																	
Round 6																	

## AOF Test Check Program 2018 - Round 4

Appendix 1:

$$z = (x - X) / \hat{\sigma} \quad \text{..(19)}$$

where  $\hat{\sigma}$  is the standard deviation for proficiency assessment.

**NOTE** ISO Guide 43 uses the symbol  $s$  for the standard deviation in the definition of the z-score. This is appropriate when this quantity is derived as the standard deviation of a number of results, but not in other cases (for example, when it is calculated from the results of a precision experiment, or by reference to a generalised linear model).

**Interpretation of z-scores.** When a participant reports a result that gives rise to a z-score above 3,0 or below -3,0 then the result shall be considered to give an “action signal”. Likewise, a z-score above 2,0 or below -2,0 shall be considered to give a “warning signal”. A single “action signal”, or “warning signals” in two successive rounds, shall be taken as evidence that an anomaly has occurred that requires investigation.

Reference : ISO 13528 statistical methods for use in proficiency testing by interlaboratory comparisons
