Optimising canola phenology

Genetics and environment drive phenology

Genome

- genetic effects
- GxG

Environment

- plastic responses

Interactions

- GxE

Capturing response to temperature

Example - phenology
response multi-site data

Parameters

- TT to flower – no vern
- Vern response saturated
- Rate of response to vern

The current state

APSIM canola model simulates phenology

Does this accurately

But..

Phenology parameters must be estimated first

Compounded by rapid turn-over of canola varieties

The screenshot shows the homepage of the Canola Flowering Calculator. At the top left is the CSIRO logo. The main header is a yellow banner with the title "Canola Flowering Calculator" and the subtitle "Helping you optimise your canola program". A link "Learn more about this tool >" is on the right. Below the banner, the text "Choose your scenario below to get started" is centered. Two dark teal cards are displayed side-by-side. The left card has a yellow flower icon and asks "Which variety should I sow? (I know my intended sowing date)" with a "Go" button. The right card has a yellow sun and field icon and asks "When should I sow? (I know my variety)" with a "Go" button.

Performance of the current state

Performance of the genomic model

observed phenology

observed phenology

Performance of the genomic model

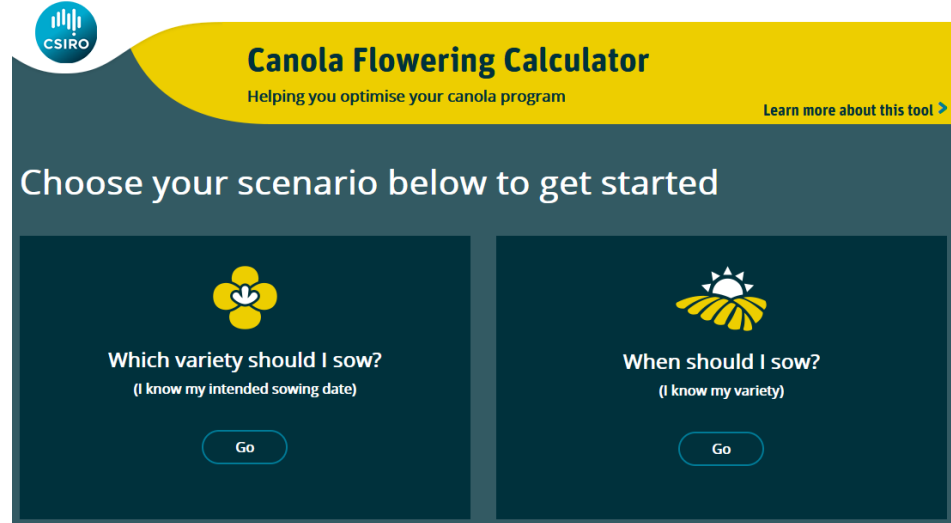

Scenario 4

$R = 0.87$ AUS and international varieties

Error within < 10 days on for AUS lines

CONCLUSION

- Genome-based phenology model performance highly encouraging
- More validation/refinement ongoing
- Updated phenology App on the way, including **wheat and barley**
- Use the current Canola Flowering Calculator!
- Breeders, consider providing access to your material for inclusion in the model.

The screenshot shows the homepage of the Canola Flowering Calculator. At the top left is the CSIRO logo. The main header is yellow with the title "Canola Flowering Calculator" and the subtitle "Helping you optimise your canola program". A link "Learn more about this tool" is on the right. Below the header, a dark blue banner says "Choose your scenario below to get started". Two main options are presented in dark blue boxes: "Which variety should I sow? (I know my intended sowing date)" with a yellow flower icon and a "Go" button; and "When should I sow? (I know my variety)" with a yellow sun icon and a "Go" button.
