

**CURRENT AGRICULTURAL PESTICIDE MINOR USE PERMITS FOR OILSEED CROPS
Updated June, 2023**

The Grains Research and Development Corporation's (GRDC's) "Pathways to Registration Minor Uses" project seeks to gain access (registered or permitted for use) to crop protection solutions identified by industry to be needed for continued sustainable production of minor grain crops. The project seeks to collaborate with State departments of agriculture, independent advisers and the chemical industry to obtain the information necessary to gain regulatory approvals for the nominated pest management solutions. The program aims to consider pesticide (herbicides, fungicides and insecticides) use in minor crops or minor uses in major crops.

Compliance:

Minor Use permits are granted on the basis of best available information. Part of the conditions of approval may involve the permit holder to develop further supporting data to validate the use for further permits or registration. Often this validation involves test regimes determining acceptable pesticide residue in the crop commodities. **IT IS CRITICAL** permit users adhere to the permit and label use restrictions and recommendations to minimise export, crop safety and other potential issues associated with use.

The different crops can be accessed from the contents table; permits can be accessed by control/clicking the URL address of the permit description of interest and choosing to open the hyperlink. The following tables have direct links to the APVMA approved permit web site and will display permits as PDF files (which can be downloaded and printed).
